15 LIFE ON LAND

15.3.1

Sustainable use, conservation and restoration of land (policy)

Have a policy to ensure the conservation, restoration and sustainable use of terrestrial ecosystems associated with the university, in particular forests, mountains and drylands

- The university's experimental forest field site is located in northeastern Taiwan. Its management objectives are to assist with the teaching internships and research in forest science, environmental and ecological education, and the inheritance and promotion of forestry techniques, as well as to cultivate advanced forestry professionals. In line with the global sustainable environment and the development direction of net-zero carbon emissions, it integrates smart supervision technologies to promote carbon-negative accumulation, sustainable ecology, forest wellness, forest economy, application of domestic timber, wood education, and other sustainable forestry programs. This management aims to achieve a variety of objectives including environmental conservation, national land security, and social welfare, operating in such a way as to provide the public with a shared and excellent forest environment and sustainable resources.
